Relaxation

Three-Part Breath

This breath pattern is an invaluable tool for giving your body and mind a quick reset by intentionally guiding your belly, ribs, and chest to expand on the inhalation and fully relax on the exhalation. Sometimes called “diaphragmatic breathing,” it is often used therapeutically to reduce pain, anxiety, and sleep disturbance. The Three-Part Breath practice can be done anywhere and anytime, multiple times a day or at night. While you can do this practice in any position—lying down, sitting, or standing—it’s easiest to learn when you’re lying down or sitting in a reclined position. Try this breath for a few moments (5 to 7 complete rounds) and then notice how you feel.

Figure 5.1 Three-Part Breath

Part 1: Rest your hands on your belly, just below the navel. As you take your next breath in, let your belly soften and expand like a balloon. As you breathe out, let your belly sink toward your spine. Repeat 3 times.

Part 2: Rest one hand on your ribs and one hand on your belly (see figure 5.1). With your next inhale, let your belly soften and feel your ribs expand to the left and to the right. As you exhale, let everything sink. Repeat 3 times.

Part 3: Rest the hand that was on your ribs on your upper chest, just below your collarbones. As you breathe in, allow your belly to soften, your ribs to expand, and your upper chest to broaden. As you exhale, let everything go. Repeat 3 times. Spend a few moments here, with one hand on the chest and the other on the belly, exploring this three-part rhythm. Allow this full, easy breath to open and nourish your body.

As you release the Three-Part Breath pattern, take a moment to notice how your body responded, how your emotional heart responded, and how your mind responded to this breathing practice.

Note: Three-Part Breath is *not* meant to be used all the time during your practice. It should be done as a periodic reset for your body and mind.

Range-of-Motion Sequence

Neck Release

Figure 5.2 Neck Release

Setup

Lie on your back with your knees bent, soles of the feet flat on the ground, and arms at your sides. If your chin is higher than your forehead, place a folded blanket or towel behind your head so that your chin is at the same level—or slightly below—your forehead. Tune in to your breath.

Movement

Inhale in place.

Exhale and rotate your head to the right, looking over your right shoulder (see figure 5.2). Invite your left shoulder to be a little heavier.

Inhale back to center.

As you exhale, rotate your head to the left, looking over your left shoulder. Invite your right shoulder to be a little heavier.

Repeat this for a few cycles of breath.

Feel free to linger with your head rotated to the right and then left. Close your eyes, if you like, and feel into the sensations.

Remember

- Try not to force your head in one direction or the other.
- Be sure to keep the natural curve in the back of your neck. If you are elevating your head with a folded towel or blanket, make sure it's not so high that your neck flattens.
- Notice, without judgment, any differences between the movement to the right and to the left.

Supple Spine Flow

Figure 9.1

Figure 9.2

Setup

Come down onto your hands and knees on a mat or soft carpet. In this table-top position, place your hands under your shoulders and your knees under your hips. Feel free to cushion your wrists and/or your knees with a folded towel or other prop.

Movement

Inhale as you lift and extend your breastbone toward the wall in front of you and your tailbone toward the wall behind you (see figure 9.1).

Exhale as you drop your tailbone down and relax your head toward the ground. Avoid emphasizing the rounding of your upper back as you relax your head and tailbone down—in other words, do not press down with your arms to strongly round your back.

Inhale and lift your heart forward and your tailbone up and back—so your spine arches in two directions, like a smile.

Exhale and relax your tailbone and your head down.

Continue extending and articulating your spine in this way for a few breaths, trying to synchronize your movement with your breath.

Next, as you exhale and drop your tailbone and head, also move your buttocks as close as they will come to your heels (see figure 9.2). This posture is known as Child's pose.

Inhale back to hands and knees, and extend your heart forward and your tailbone behind you.

Exhale as you drop your tailbone and move your buttocks back toward your heels again into Child's pose.

Continue this rhythm for a few breaths.

Then pause with your buttocks as close to your heels as they will comfortably go, and relax your head toward the ground. If your forehead doesn't comfortably reach the ground, please give it a place to rest—be sure your head doesn't just hang. You might

stack your palms or fists and rest your forehead on them. Or, if you prefer, rest your forehead on a block or cushion.

Relax here for several breaths, inviting your breath to nourish your low back, waist, shoulder blades, and neck.

Remember

- If your wrists aren't able to support the weight of the arms and shoulders, explore coming onto your fists or lowering down onto your forearms.
- If your knees and/or wrists are sensitive, try placing a pillow or a rolled towel under them.
- Bring your buttocks back toward your heels only as far as is comfortable.
- Welcome the simple pleasure of just being.

Caution

- Avoid pressing into the ground with your hands when your head and tailbone are dropped. Pushing your spine into this rounded "Halloween cat" position can place too much force on the vertebrae.

Spinal Balance

Figure 10.6

Figure 10.7

Figure 10.8

Setup

Come onto your hands and knees on a mat or soft carpet. In this tabletop position, place your hands under your shoulders and your knees under your hips. Feel free to cushion your wrists and/or your knees with a folded towel or other prop. Tune in to your breath.

Movement

Root down into your hands. Feel a sense of aliveness in your arms and chest. Be sure to keep length in your spine, with the top of your head extending forward and your tailbone extending back.

Draw your belly toward your spine using the action of the Royal Cough (see page 168).

Extend your right leg back and tuck your toes under so they rest on the ground (see figure 10.6).

On an inhalation, lift your right leg up with your foot flexed, keeping the front of your knee and the tips of your toes pointing directly toward the ground (see figure 10.7).

Keep your breath flowing as you continue to extend your leg back, as if your heel could touch the wall behind you. Be sure that the front of your right hip is parallel to the ground.

To add more challenge, crawl the fingers of your left hand forward, then float your left arm up (see figure 10.8).

Rotate the palm of your left hand so that your thumb is pointing toward the sky.

Maintain strength and awareness in your belly to support your extended limbs by hugging the belly to the spine.

Lengthen across the diagonal of your body, extending from the fingertips of your left hand to the heel of your right foot.

After a few breaths, return your hand and knee to the ground.

Relax your head and let your tailbone be heavy.

Breathe into your back.

Repeat on the other side.

When you are finished, feel free to rest for several breaths in Child's pose.

Remember

- Let your breath be easy.
- If your knees are uncomfortable, try placing a pillow or rolled towel under them.
- If this position is too demanding for your wrists, try coming down onto your forearms, or make fists and balance on your knuckles. Sometimes a little cushion under the heels of your hands (such as a folded washcloth) can help.

Caution

- Avoid pushing into your hands too strongly—be sure not to round your back when you root down into your hands.

Mountain Pose

Figure 6.1 Mountain pose

Setup

Stand beside or behind your chair, close enough to lightly touch the back of the chair for support, if needed. Position your feet hip-width apart and snuggle the soles of your feet into the ground.

Movement

Energize your legs, as if you were drawing up energy from the ground.

Release your tailbone down toward the ground, lengthening your lower back.

Gently draw your lower belly in and up, and lift your rib cage up off of your pelvis.

Relax your shoulders down away from your ears, and allow your arms to rest by your sides.

Extend the top of your head up toward the sky, so that your spine elongates.

Let your chin be parallel to the ground, neither lifted nor tucked.

Gaze softly toward the horizon, with your shoulders, throat, and face relaxed (see figure 6.1).

Let the light of your heart shine forward.

Take several slow, easy breaths, filling and emptying your lungs completely.

Remember

- Feel yourself as strong and stable as a mountain.
- Sense the simultaneous downward and upward energies: rooting your legs and lifting your spine.

Universal Arms

Figure 7.6

Figure 7.7

Setup

Sit tall in Seated Mountain pose: sitting slightly forward of the back of your chair, feet hip-width apart on the ground (or a prop).

Figure 7.8

Figure 7.9

Movement

Bring your palms together in front of your breastbone (see figure 7.6).

Pause and feel your breath.

Interlace your fingers.

Inhale and float your elbows up toward the sky (see figure 7.7).

Exhale and turn your knuckles forward as you extend your arms forward, dropping your head toward your heart (see figure 7.8). Be sure to keep your chest lifted—not collapsed—as you do this.

Inhale and turn your palms away from your chest, keeping your fingers interlaced, as you extend your arms up toward the sky (see figure 7.9).

Exhale and sweep your arms out to the sides.

Inhale as you bring your palms together in front of your breastbone.

Exhale as you interlace your fingers.

Repeat the sequence two or three more times, synchronizing your movement with your breath.

When you are done, pause in Seated Mountain pose and rest in the wave of the breath.

Remember

- Sit tall with a neutral spine and relaxed shoulders.
- Notice the response of your body.
- Notice the waves of sensation.
- Notice the currents in your heart.
- Notice any reflections in your mind.

Side-Angle

Setup

Stand behind your chair in a wide stance, as with Warrior 2 pose.

Movement

Rotate the toes of your right foot 90 degrees to the right.

Rotate the toes of your left foot about 15 degrees to the right. Gently root into the left heel.

Inhale and extend your arms to the sides while lengthening your spine upward.

Exhale and bend your right knee until it is over your right heel and pointed in the same direction as the toes of your right foot.

Keep your breath flowing as you place your right hand on your right thigh.

Extend your left arm toward the sky as high as is comfortable (see figure 6.6).

Linger here for a few breaths. On each inhalation, allow your breath to nourish the entire left side of your body. On each exhalation lengthen your left side body, pressing down through your left heel as you reach up with your left hand.

Figure 6.6 Side-Angle pose

When you are ready to come out of the pose, straighten your right knee, lower your left arm, and bring your body back to center.

Repeat on the other side.

Remember

- Make sure you can see your toes when you bend your knee over your heel.
- Keep your bent knee in line with your toes to avoid strain on your inner or outer knee.
- If you have the range of motion and strength, try placing your forearm on your thigh to deepen the stretch.

Caution

- This is a large-muscle activity and can be demanding—so please keep your breath flowing.

Chair Flow

Setup

Stand tall in Mountain pose.

Figure 11.15

Figure 11.16

Figure 11.17

Movement

Inhale and sweep your arms out and up (see figure 11.15).

Exhale and hinge forward from your hips as you bend your knees and extend your bottom back into Chair pose, bringing your hands to your thighs (see figure 11.16).

Inhale and press your palms into your thighs as you straighten your legs and lengthen your back (see figure 11.17).

Figure 11.18

Exhale and float your arms forward as you bend your knees and draw your bottom back into Chair pose (see figure 11.18).

Inhale and root into your feet, straighten your legs, and extend your arms out and up, gazing up and coming to standing (see figure 11.19).

Exhale and sweep your arms out to the sides and come back to Mountain pose (see figure 11.20).

Continue for several cycles, or as long as it feels nourishing.

Figure 11.19

Figure 11.20

When you are finished, rest your palms on your chest for a few moments and feel the effect this practice has on your breath, your heart, your body, and your mind.

Remember

- Keep your thighs parallel so your knees don't collapse into each other.
- Avoid rounding your back—keep a neutral spine (see “Healthy Body Mechanics,” page 52).
- Feel free to rest whenever you need to.

Tree

Figure 8.1

Figure 8.2

Setup

Stand beside your chair close enough to lightly touch the back of the chair for support. Position your feet hip-width apart, and snuggle your soles into the ground.

Movement

Stand tall in Mountain pose with your weight evenly distributed between both legs.

Send “roots” down through your right leg.

Lift your left heel, keeping the ball of your left foot on the ground.

Turn your left knee out slightly to the left as you slide the sole of your left foot against your right ankle.

Steady your gaze at the horizon and breathe easily.

For more challenge, pick your left foot up off the ground and place the sole anywhere along the inside of the right leg, except on the knee. Feel free to lightly hold the chair for support if you like (see figure 8.1).

Explore bringing your palms together in front of your chest. Feel free to touch your left foot back on the ground if necessary (see figure 8.2).

For even more challenge, extend your arms up overhead with your shoulders relaxed.

Play with balancing here for several breaths, then return to Mountain pose.

Repeat on the other side.

When you are done, stand in Mountain pose for several breaths and notice any thoughts, feelings, and physical sensations that arise.

Remember

- Breathe comfortably and observe the small adjustments required to maintain balance.
- Try to visualize yourself as a tree—are you a sturdy oak? A supple willow? A stately palm?
- Allow your breath to help your pose blossom from the inside out.
- Notice if you feel any difference between your ability to balance on each side.

Caution

- Avoid pressing your foot directly against the knee of your standing leg.
- Avoid locking or hyperextending the standing knee. Keep it “soft” by maintaining a slight bend.
- If the knee or hip of your standing leg is painful, practice keeping the toes of the bent leg on the ground to reduce the pressure on your standing leg.

Crocodile

Figure 9.3 Crocodile pose

Setup

Come down to rest on your belly. Bend your elbows and stack your hands to make a little pillow for your head, turning your neck so that your cheek or your ear rests on the back of your hands. If it's uncomfortable to turn your head in this position, please rest your forehead or chin on the back of your hands (see figure 9.3).

Movement

Allow your body to relax completely, so your weight releases down into the earth.

Let your heels turn away from each other.

Take a few slow, deep breaths.

Feel your back body expand with the inhalation and relax on the exhalation.

If you are resting on your cheek or ear, turn your head to the other side for a few breaths.

Remember

- Notice the effects of this gravitational and energetic shift.
- Completely surrender your body weight into the earth.
- Be aware of the sensations in your physical body, any waves of emotion, and any thoughts in your thinking mind.
- If lying on your belly is uncomfortable for your feet or legs, try putting a rolled towel under your ankles.

Baby Cobra

Figure 9.5 Baby Cobra pose

Setup

Rest on your belly with your elbows bent, one hand placed on top of the other as in Crocodile pose. Rest your cheek, chin, or forehead on the back of your stacked hands. Pause here and take several belly-focused breaths.

Movement

Move your arms down along your sides, palms down. Rest your forehead or chin on the ground.

Root the front of your pelvis into the ground.

Extend your legs back and press the tops of your feet into the ground.

Shrug your shoulders back and down.

Inhale and lift your head, shoulders, and chest up off the ground (see figure 9.5).

Exhale and soften a bit so that your body moves slightly back toward the ground.

Continue with this integration of breath and posture: inhale and lift, exhale and soften.

Keep energy moving down through your legs.

Explore remaining in the lifted position while still feeling the rise and fall of the breath.

On an exhalation, release back to the ground and rest.

Breathe into your back and notice where your breath moves.

Remember

- Only lift your head, shoulders, and chest as high as comfortable. Your strength will build over time with practice.
- Keep the front and back of your neck long, without jutting the chin forward. This means your gaze will likely be down, not forward.

Knees to Chest

Figure 9.8 Knees-to-Chest pose

Setup

Lie on your back with your knees bent, feet flat on the ground, and arms at your sides. If your chin is higher than your forehead, place a folded blanket or towel behind your head so that your chin is at the same level—or slightly below—your forehead. Tune in to your breath.

Movement

Bring both knees toward your chest as close as is comfortable.

Hold on to your legs behind your knees or on top of your shins (see figure 9.8).

Welcome breath into the back of your body—your tailbone, your love handles, behind your heart.

Linger here for several breaths. You might notice that, as you inhale and fill your body with breath, your thighs move slightly away from your body. As you exhale and release

used air, you might hug your thighs in just a little more and feel the sensation of stretch in your low back.

After 3 to 5 breaths, or when you are ready, return the soles of the feet to the ground with your knees bent.

Remember

- If it feels like a strain to hold your legs with your hands, use a strap over your shins or behind your thighs to keep your thighs close to your belly. If this still feels stressful, let your arms rest at your sides. You can also hug one leg at a time if that is more comfortable. If you have knee arthritis, it may be more comfortable to hold behind your thighs instead of holding your shins.
- Feel free to widen your thighs to make room for your belly, if you like.
- Notice how the waves of breath and the waves of sensation come into relationship.
- Discover the various responses—physical, emotional, mental, energetic—to the posture.

Supine Twist

Figure 5.8 Supine Twist

Setup

Lie down with your knees bent and your feet about hip-width apart. Extend your arms out to the sides, palms up or down, whichever feels better.

Movement

Rock your knees from side to side, slowly and gently. Be sure to keep your feet on the ground.

Turn your head in the opposite direction of your knees, keeping your movement and your breath smooth and easy (see figure 5.8).

Repeat a few times.

Linger with your knees dropped to one side and your head rotated to the other. Rest here for a few breaths.

As you inhale, fill your body with breath. Inhale into your hips, waist, ribs, and armpits.

As you exhale, soften into the twist. Let each exhalation be an opportunity to release and let go.

When you are ready, inhale your legs back to center and square yourself off.

Then exhale and linger with your knees dropped to the other side. Rest here for a few breaths.

When you are done, come back to center with bent knees and both feet on the ground, and relax.

Remember

- When resting in the twist, feel free to place a rolled blanket or towel underneath your leg for support if your knee doesn't comfortably reach the ground.
- Do not force your leg to touch the ground.
- Release the weight of your arms and shoulders into the ground as you gently rotate your spine above and below this area.

Relaxation

Figure 5.9 Relaxation pose

Setup

Rest with your legs straight or knees bent, whichever is most comfortable. Feel free to place a rolled blanket or towel under your knees. Let your hands relax by your sides, palms turned up or down, whichever position allows your shoulders to feel the most at ease (see figure 5.9). Close your eyes and give over the weight of your body to the ground.

Movement

Take a full breath in and let it go with a sigh.

Again, take a full breath in and release with a sigh.

One last time, take a full breath in and exhale with a sigh.

Become aware of the pool of sensation that is your body.

Feel the sensations of your feet, your legs, your pelvis, your torso, your hands, your arms, your shoulders, your neck, and your head.

Sense into your body as a whole, greet your body with kindness, and let it be.

Become aware of the waves of your emotional heart.

Sense the joy, the fear, the contentment, the anger, the sadness, the love.

Feel the currents of your heart all at once, greet your heart with kindness, and let it be.

Become aware of your thinking mind and the tendencies of your thinking mind.

Recognize the remembering, the forgetting, the liking, the disliking, the comparing, the evaluating, and the creativity.

Notice all of the tendencies of your thinking mind at once, greet your thinking mind with kindness, and let it be.

For now, the invitation is to simply *be*.

Remember

- The “undoing” is as important as the doing—learning how to let go and be still is as essential as learning how to move. Give yourself plenty of time for relaxation.
- Consider setting a timer for 5 or 10 minutes—or however long you want to practice Relaxation pose—so you can completely surrender to the experience.
